

LNT SubCooler™

LNT **SubCooler**™ is a patent protected integrated solution meeting class requirements with regards to protection gas and gas detection, and in addition providing pre-cooling of LNG bunker pipes.

Key Features

The LNT SubCooler™ is a skid based system comprising a closed nitrogen circuit providing three key features:

- **Dry protection gas**
- **Integrated gas detection**
- **Pre-cooling by energy recovery**

Benefits

The LNT SubCooler™ is based on standard components and offers the following benefits:

- **No waste of expensive dry protection gas**
- **Efficient gas detection**
- **Quick LNG bunkering sequence**
- **No release of hydrocarbon gases due to chock boiling**
